Project Name:

A program for Quiz Game.

Description:

A quiz is a game, which can also be called a mind sport where the players either as individuals or in teams attempt to answer questions. By playing this game a person can be able to test his knowledge in different fields.

Experimental Plan and Milestone:

We want to make a software that will be help Students and others to enrich their knowledge.

Related Work Elsewhere:

There are similar projects elsewhere and School, College, University use this kind of software too. Some of the software is very broad and clean. Unlike them, this software is limited and not very rich.

Feasibility Study:

To complete the project we will be needing to be contented with some components. Since it is not one big project so the component count is not that enormous.

For the project, we will be needing

1. A computer,
2. Compiler to run the program,
3. Time to complete the project,
4. Above average / Good coding knowledge,

5. Ability to solve / deal with mathematical problems

Project Functionality:

The project will have following functionalities

1. When we run the program, we will see 3 options that we can choose from according to our needs.
2. There will be options like Country, Name, Gender to choose from.
3. At first, we have to select all of that option, Then we can see some rules in the game.
4. We will add 20 questions, Every ques have 3 option.
5. If someone get less than 40 marks then he/she will be fail. And if someone get more than 80 marks then he/she will be excellence in the game.
